HANDY INFORMATION FOR YOUR STAY AT THE MARATHON COACH SERVICE DEPARTMENT

Temp-Coat

Temp-Coat is a liquid latex ceramic form of insulation. Unlike mass insulations which restrict air flow, Temp-Coat works by control and movement of the thermals within billions of hallow ceramic beads in the product. The air in the beads form a barrier against cold and heat using a process known as emittance and diffusivity to contain and control temperatures.

As a thermal reflective roof coating, temp-Coat at a 15 mil thickness has been rated by certified labs equivalent to four inches of insulating foam with an R-20 rating.

Approved and accepted by:

Navy Safety & Survivability
U.S. Coast Guard
USDA
Dept. of Energy

- Insulates
- Protects
- Curbs Condensation
- UV Resistant
- Enhances and Extends Life
- Year Round Energy Savings
- Designed for Industrial and Marine Use
- Superior Adhesion
- Stops Leaks
